

TALKS BY VISION THERAPIST, MR. ZORAN PEJIC

What are the signs of visual challenges in a child with learning difficulties?

Treatment modalities for remediation of visual challenges affecting academics and behaviour.

Mr. Zoran Pejic holds a MSc in Orthoptics and Special Education-Vision Deficiency, and has completed a course in Behavioral Optometry under the British Association of Behavioral Optometrists. Furthermore, he has a postgraduate certificate (MMedSci) from Sheffield University.

In addition, he is a licensed INPP practitioner, which has given him tools to assess neuro-developmental maturity in children and adults and recommend treatment. This has added one more valuable modality to the plethora of the multidisciplinary approach in his work with children and adults.

Zoran's passion for a deeper understanding of the relationship between mind matters and vision is the driving force behind his PhD, with which he aims to bridge vision, education, and psychology.

Zoran has been working with visually challenged individuals, both children and adults, for the last 19 years. He has pioneered non-surgical treatments of certain forms of strabismus (squint) at the Singapore National Eye Centre, where he worked for 7 years.

He has published articles in a number of medical journals. Zoran is the founding president of the Asia Pacific Orthoptic Association and a management committee member of the International

Orthoptic Association.

Working at the Singapore National Eye Centre and KK Hospital has given him extensive experience in working with children, and an ability to be innovative in his approach to treating their visual challenges. In addition to this, Zoran's background in special education and experience in working with children in Europe and Asia has given him an ability to understand different cultural milieu and their impact on visual/learning abilities.

Zoran's work with adults is focused on non-surgical management of certain forms of strabismus (squint), headache (migraine), blurred vision, and overall compensated quality of life due to insufficient visual abilities.
